

UROLOGY

You have options close to home.

Combining the clinical and surgical expertise of highly skilled physicians with experienced staff, we diagnose, treat and manage patients with urological disorders of the kidney, bladder, prostate and other organs.

The Medical Center and a local network of urologists with Graves-Gilbert Clinic provide Southcentral Kentucky comprehensive medical and surgical care for adult and pediatric urology. Utilizing the latest technology and advanced therapies, we perform laparoscopic procedures of the kidney, laser treatments of stones, and minimally invasive robotic surgery with the new da Vinci® Surgical System. This enables us to provide state-of-the-art treatment and excellent patient care right here in Southcentral Kentucky.
